

1 Incoherence-Based Experiment Analysis

This report presents a statistical analysis of the model’s performance across tasks, focusing on the relationship between incoherence scores (Incoherence) and execution errors (Error).

Number of tasks analyzed: 982

2 Introduction

This report summarizes the results of an automatic evaluation of code generation using the following configuration parameters.

| Parameter | Value |
|--------------------------------------------------|------------------|
| Language Model | deepseek_v3_0324 |
| Temperature | 0.2 |
| m (number of candidates) | 50 |
| n (number of samples used to estimate metrics) | 1000 |
| Timeout per metric estimation (s) | 60.0 |

The model was tested across a suite of programming tasks. We aim to explore how the model’s incoherence signal relates to execution-time failures.

2.5 Log-Log Plot of Incoherence and Error

This plot displays the relationship between Incoherence and Error in log-log scale. Only data points where both values are strictly positive are included.
